

GoInformatics

ELEVATING RESEARCH AND DEVELOPMENT

“Most institutions have a research and development area where the innovation happens. Our goal is to help those groups better collect and secure that data. They can rely on our GoLIMS platform ... and take quality products to market quicker.”

*Juan Medina
director of business development

Company DNA

- Based in South Bend
- Serves academic institutions and businesses
- Established in 2010 at Innovation Park at Notre Dame
- Approximately 32 employees
- GoLIMS (laboratory information management systems) is the organization’s cloud-based research management platform

Behind the scenes

The people at GoInformatics are passionate and empowered. “We love that we can do our work from wherever we are as long as we have an Internet connection. When those blizzards (in January) came, we all met online. We didn’t shut down. It’s part of our culture here.”

Beyond science

“Every day, I’m talking to clients who are trying to cure a rare disease, eradicate hunger by providing better crops and trying to find better sources of energy. That’s one of the things that keeps me motivated and passionate about what we do.”

Perfecting the formula

Since its inception, GoInformatics has experienced tremendous growth. More is on the way in 2014, with the company expected to nearly double in size.

Always available

GoLIMS offers centralized, round-the-clock access to data (including projects, electronic notebooks and files) via browsers, tablets and smartphones. “The overarching goal is to provide a product that is easy to use and always accessible.”
